SPRINGER-MILLER SYSTEMS
SMS|HOST® AND INFOGENESIS® POS INTERFACE

Interface Functionality

SMS|Host's 'Level 3' POS interface utilizes our web servicing technology, SMS|Diplomat, to provide seamless integration with the InfoGenesis Point of Sale application.

The SMS|Host Level 3 POS interface to InfoGenesis uses a SOAP/XML-based messaging standard to communicate directly between the systems in real time. The same messaging standard enables the SMS|Host user to retrieve information from the InfoGenesis POS system in real-time, therefore enabling a truly cooperative processing environment.

Interface Benefits

SMS|Host's Integration eliminates discrepancies in data between systems that can lead to inaccurate information, poor customer response times and missed opportunities.

SMS|Host's InfoGenesis POS interface allows both systems to have improved accuracy of information and overall efficiency through:

- Pre-posting inquiries that provide the InfoGenesis user with detailed SMS|Host guest and reservation data
- Posting of detailed charges from the InfoGenesis POS to the SMS|Host system
- Providing real-time (zoom) check-level data from the InfoGenesis POS to the SMS|Host user
- Daily posting of (non-guest room) summary data from the InfoGenesis POS to the SMS|Host system. This provides accurate reporting of all POS revenue center totals from within the SMS|Host system
