## SPRINGER-MILLER SYSTEMS

SMS|HOST® AND INNCOM BY HONEYWELL INTERFACE

### Interface Functionality

SMS|Host's In-Room Energy Management connector utilizes our web servicing technology, SMS|Diplomat, to provide seamless integration with Honeywell's Inncom application.

Inncom develops advanced guest-room control software systems for the hospitality/lodging industry. The SMS|Host in-room energy management interface to Inncom uses the HTNG SOAP/XML-based messaging protocol to communicate directly between the systems. This industry standard provides the framework that enables the SMS|Host system to send current information to Inncom, thereby enabling energy savings and guest-centric service.

### Interface Benefits

Integration eliminates discrepancies in data between systems that can lead to poor customer response times and missed opportunities.

SMS|Host's interface with Inncom allows both systems to have improved accuracy of information and overall efficiency through:

- The management of downstream in-room functions via real-time delivery of SMS|Host guest room status messages - specifically the check-in, check-out and room move events
- The sharing of SMS|Host profile/preference data which enables Inncom to tailor the room's environmental controls to the guest's liking.

INFORMATION SENT	SYSTEM DIRECTION	TIMING
Check-in, check-out and room moves	SMS Host to Inncom	Near Real-time
Profile and preference data	SMS Host to Inncom	Near Real-time
