SPRINGER-MILLER SYSTEMS
SMS|HOST® AND TRAVEL TRIPPER REZTRIP CRS INTERFACE

Interface Functionality

Springer-Miller's SMS|Host's two-way 'Level 3' distribution interface utilizes our web servicing technology, SMS|Diplomat, to provide seamless integration with Travel Tripper's suite of Distribution Services including their Central Reservations, web booking engine and GDS connectors.

Travel Tripper delivers innovative and sophisticated technology through RezTrip. This interface will not only drive revenue opportunities but will lower costs associated with the manual process of updating rates and inventory across multiple booking channels.

Interface Benefits

SMS|Host's Integration eliminates discrepancies in data between systems that can lead to inaccurate information, poor customer response times and missed opportunities.

SMS|Host's 'two-way' RezTrip Interface allows both systems to have improved accuracy of information and overall efficiency through:

- Automating reservation creation for bookings which originate in RezTrip or any extranet channels that funnel through the product
- Delivering real-time availability updates to RezTrip as data changes in SMS|Host
- Automating the update of sell pricing in RezTrip, in real-time, once a rate value is updated in SMS|Host
- Allowing a hotelier to manage business strategies of how much and which inventory should be sold in SMS|Host and providing the ability to support last room availability (LRA)
