

# SMS|Host + Beachy Interface

## Interface Functionality

SMS's Point-of-Sale Level 3 interface with Beachy utilizes SMS' XML web services to deliver seamless integration between SMS|Host and Beachy's Beach Management system. The integration allows Beachy to verify a guest's reservation information and post a room charge to their folio. The recently expanded integration to a Level 3 interface also includes functionality to retrieve check details from Beachy as well as End of Day financial imports.

## Interface Benefits

- Reservation data synchronization allows Beachy to have SMS|Host's reservations on-hand to perform verification of guest room and info.
- Integrated room charges from Beachy's app – quickly post a charge to the reservation/account specified.
- Look up in-house rooms using suite components.
- Perform a "check zoom" from SMS for Beachy's check details.
- End of Day financial summary import into SMS.

## Information Sent

Reservation information push	SMS pushes reservation updates to Beachy
Check-in/Check-out notifications	SMS pushes reservation level changes to Beachy to notify of check-ins & check-outs
Room Charges	Sent from Beachy to SMS
Check-Zoom	SMS to request check details from Beachy
Business Day Listing	SMS to request a list of available business days for import from Beachy
Business Day Summary Import	SMS to request a financial import for available business days.

## Software Requirements:

The product is compatible with, and requires, the following versions of Springer-Miller's software:

- SMS|Host v22.0+
- SMS|DipHost v5.4.0000-0000

## Hardware Requirements:

Springer-Miller Systems' interface to Beachy requires a SMS|Diplomat Type I Server. For full specifications on the hardware requirements, please contact your Installed Accounts Sales Representative for a current copy of contract Exhibit A – Hardware Requirements document.
