

SMS|HOST® AND CHECKPLEASE INTERFACE

Interface Functionality & Benefits

Springer-Miller Systems' Level 1 Point-of-Sale interface utilizes our web servicing technology, SMS|Diplomat to provide seamless integration with the CheckPlease invisible payments solution.

The interface allows both systems to have improved accuracy of information and overall efficiency through:

- Pre-posting inquiries that provide the CheckPlease user with detailed reservation, C/L, and Member account data
- Posting of detailed charges from CheckPlease to the SMS|Host system

CheckPlease

CheckPlease was created to help optimize the guest check-out experience at a property's F&B revenue centers. With CheckPlease's Scan-to-Pay or Text-to-Pay products, guests can easily view their check in real time, via their own mobile device, and have the option to pay using a Room Charge, Credit Card, ApplePay or GooglePay. CheckPlease integrates to the property's existing systems so there is minimal operational impact and things in the back-office stays the same. CheckPlease's PMS integration with SMS|Host® provides the ability to do a real time room and credit validation to then post a room charge. CheckPlease also integrates with numerous POS systems as well as Payment Processors and Gateways to make the experience seamless.

Communicated Information

Your SMS|Host system and the CheckPlease interface support but is not limited to:

INTERFACE FUNCTIONALITY

Pre-posting inquiry (Guest Name, Reservation, C/L, and Member Account)

Posting of room charges (Reservation, C/L, and Member Account)

Software and Hardware Requirements

The product is compatible with, and requires, the following:

- Current release of the SMS Product Suite
- Diplomat Type I or II server (see Exhibit A - Hardware Requirements document)
