

SMS|HOST® AND DORMAKABA INTERFACE

Interface Functionality & Benefits

Springer-Miller Systems' Electronic Door Lock interface utilizes an IP based communication protocol to provide seamless integration with dormakaba's Ambiance™ (a Saflok 6000™ emulation).

The interface allows both systems to have improved accuracy of information and overall efficiency through:

- Generation of Initial and Additional Keys directly from the SMS|Host reservation and the ability to dynamically define the key encoder from SMS|Host.
- Ability to configure multi lock access on a single key such as common rooms, spa, pool, etc.
- Track 1 and 2 data encoding
- Multi-prop compatibility
- Ability to dynamically define key encoder from the SMS|Host user interface

Dormakaba

Ambiance is dormakaba's next-generation software solution meeting your property's complete access control needs. Web-based and managed through configurable user permissions and secured system access.

Ambiance users can manage guests either through the native client or interfaced through your property management system (PMS). Property configuration, key creation and user management are simpler than ever because of the software's guided workflows supporting faster user adoption.

Communicated Information

Your SMS|Host system and the Dormakaba Ambiance interface supports but is not limited to:

INTERFACE FUNCTIONALITY

Initial and Additional Key

Check In Date/Time and Check Out Date/Time

Check In Date/Time

Track 1 (Misc Information is Configurable)
