

## SMS|Host® Scheduled File Export with Shogo

Springer-Miller Systems' Scheduled File Export (SFE) provides a framework to support automated, schedulable, one-way exports of files in various formats from SMS|Host to complimentary hospitality systems.

Shogo is a cloud-based business automation service that automatically posts Point-of-Sale or eCommerce sales data to your accounting system.

### Functionality

Acting as a protective gateway to your system, the SFE facilitates rapid and reliable access to files that a property wants to share with vendors or other external entities. Utilizing a flexibly configured scheduler, files designated for transport, either by naming convention or specific location, will be automatically forwarded to a validated set of SFTP credentials at the destination. This transmission mechanism accommodates the CSV export of a report, the output of a utility that has been run in the PMS or a file manually placed in a location for external transport.

### Scheduled File Export Benefits

By employing Springer-Miller's SFE, properties gain the following benefits:

- **Security:** increased through elimination of direct/uncontrolled external access to SMS|Host
- **Protection:** reliance on SFTP ensures that all files are transported in an encrypted format
- **Reliability:** consistent and dependable delivery of data
- **Automation:** fully autonomous transport processing
- **Frequency:** scheduling ensures files are sent as expected
- **Economy:** the SFE can support multiple vendor exports from a single installation
- **Performance Safeguard:** reliance on an official export protects against unintended performance degradation

### Concept of Shogo

Shogo utilizes data from the SMS|Host Back Office interface. The output file contains a summary of the day's financial activity by General Ledger number for a single property or separate files generated for individual multi-properties. The exported text file can be formatted as Comma Delimited (CSV), Tab Delimited, Fixed Length (separated by commas) or Standard Data Format (fixed length fields without separation).

### Exported Content for Shogo

Contents

- SMS Back Office File Transfer (BO-IFACE)

## Frequency

- The file should be generated nightly following the End-of-Day for the Period Ending with the prior date. If running as an Automated Night Audit Task, the export is defined as "1 day prior to the run date".

## Location

- The Scheduled File Export interface resides on the Legacy Interface Server and the files will be placed in \HOSTPLUS\EXPORT\SHOGO\.

## Software and Hardware Requirements

The product is compatible with, and requires, the following:

- Current release of the SMS Product Suite
- Multi-interface Processor (see Exhibit A, Rev. 5.0, Section 3, page 8 for details)

## For More Information
