ᴾᴹˢ|HOST® AND GemPOS by JONAS INTERFACE

Interface Functionality & Benefits

Springer-Miller Systems' Level 3 Point-of-Sale interface provides seamless integration with the GemPOS by Jonas application.

GemPOS by Jonas is a robust point-of-sale solution that can run front-of-house and back-of-house operations for busy hotel outlets. It is a flexible and scalable system that can be used in bars, restaurants, and lounges, as well as in gift shops and retail spaces.

Using the Jonas ARC Platform, ˢᴹˢ|Host's integration to GemPOS by Jonas simplifies the user experience and enhances guest service at the Front Desk and in F&B/Retail outlets by reducing wait time and manual error. It also provides detailed financial End of Day data, allowing for accurate reporting of all POS revenue from within the ˢᴹˢ|Host system.

The interface allows both systems to have improved accuracy of information and overall efficiency through:

- Real-time pre-posting inquiries that provide detailed guest and reservation data from ˢᴹˢ|Host to the GemPOS by Jonas system.
- Real-time posting of detailed charges from GemPOS by Jonas to the ˢᴹˢ|Host system, plus refunds and voids.
- Real-time check level data (folio zoom) from GemPOS by Jonas to the ˢᴹˢ|Host system
- Import of Posting Codes from the PMS, allowing codes to be created and managed within the ˢᴹˢ|Host system
- Detailed End of Day financial posting and revenue detail from GemPOS by Jonas to the ˢᴹˢ|Host system.
